NMAP to Discover Live Host using Nmap Scans

AIM:

To discover live host in a network using Nmap scans such as ARP, ICMP TCP and UDP on the TryHackMe platform

Algorithm:

1. Open the tryhackme platform and launch the assigned networking lab machine
2. Start the target machine and identify its IP address or authorised target network
3. Open the terminal in the provided Environment
4. perform an ARP scan to identify active hosts on the local network.
5. perform an ICMP ping scan to discover hosts responding to ping request.
6. perform UDP based discovery to check for responses from UDP.
7. Analyse the output and note the IP.

Result:

live host discovered using ARP, ICMP, TCP and UDP -based Nmap scan, and their responses were analysed successfully
